

Something happens in our culture that causes an **invisible disability**

Results of 1,600 children given eight test of divergent thinking ability showed:

- Ages 3-5 years - 98% scored in the creative genius category
- Five years later – 32% scored in the creative genius category
- Five years later – 10% scored in the creative genius category
- In tests of over 200,000 adults over 25, only 2% tested in the creative genius category
